

Adarsh Singh

+91 7439473588 | adarsh042021@outlook.com | linkedin.com/in/h-adarsh | github.com/h-adarsh | cyberwallah.tech

Technical Skills

Languages: C++/C, JavaScript, TypeScript, Java, Python, SQL

Frameworks & Libraries: React, Node.js, Express.js, FastAPI, Tailwind CSS, Prisma, Recharts, Zustand

Databases: MySQL, PostgreSQL, MongoDB, Redis

Tools & Platforms: Git, Docker, Linux, Playwright, Puppeteer, SheetJS, TanStack, Postman

Experience

Titan Company Limited

Jan 2026 – Present

Security Intern | InfoSec Department | Onsite, Bengaluru

AppTrana WAF Automation · Node.js, Playwright, JavaScript

- Built a headless browser RPA tool using Node.js and Playwright with a persistent SSO-aware Edge profile, automatically iterating through 170+ WAF-protected domains to request SwiftComply patches and download vulnerability reports — eliminating all manual UI navigation.
- Engineered scroll-to-load domain discovery for virtualized dropdowns, a keep-alive mechanism to prevent session timeout during long runs, and CSV audit logging with monthly folder organization for full operational traceability.

VAPT Assessment Portal · React, TypeScript, Node.js, Express, Prisma, MySQL, BullMQ, Redis, Docker

- Architected a full-stack enterprise security portal replacing manual Excel workflows, cutting report generation from 7–8 hours to under 1 hour across 5 assessment types (web, mobile, API, network, thick client) with a 4-step guided submission wizard and 14-table normalized data model.
- Integrated Titan's enterprise LLM gateway (JWT auto-refresh, 60-min rotation) with three AI interaction modes — Generate, Regenerate, and Re-score — auto-populating CVSS, CWSS, and CSES scores; CWE identifiers; severity ratings; and full remediation narratives from analyst-uploaded PoCs.
- Implemented a compliance-grade vulnerability lifecycle (open → in_progress → closed) backed by an append-only MySQL trigger-enforced audit table, async PDF generation via BullMQ and Puppeteer, SLA breach tracking, a governance risk heatmap, and per-business executive dashboards.

AWS Vulnerability Comparison Dashboard · React, TypeScript, Node.js, Express, SheetJS, TanStack Virtual, Zustand,

Microsoft Graph API, Azure AD OAuth2

- Built a full-stack security intelligence dashboard that ingests two AWS vulnerability scan Excel reports (up to 100MB) via server-side SheetJS parsing with column normalization, then runs a custom FindingArn-based diffing algorithm to categorize findings into New, Resolved, Persistent, and All Current — with vulnerability age tracking across scans.
- Engineered a virtualized React frontend using TanStack Virtual for smooth rendering of 300,000+ row datasets, Recharts KPI charts for severity distribution, per-tab Excel export, and Zustand for global state management.
- Integrated Microsoft Graph API with Azure AD OAuth2 client credentials flow to automate per-account HTML email notifications to cloud resource owners, with a Mail Log view for tracking notification delivery history.

EDR Coverage Dashboard · React, TypeScript, Python, FastAPI, APScheduler, Redis, TanStack Query, Docker

- Architected a FastAPI backend with APScheduler running 5 async background jobs (5–15 min intervals) to poll 4 security and cloud APIs — Trend Micro Cloud One, Deep Security Manager (on-prem), AWS Config Aggregator, and OCI Compute — with a pluggable Redis/in-memory cache layer decoupling UI responsiveness from upstream API latency.
- Engineered a 3-tier reconciliation engine (hostname → private IP → instance ID) classifying 1000+ cloud instances as MANAGED, UNMANAGED, UNKNOWN, or STOPPED with per-provider coverage percentages, duplicate detection, and on-demand PAM server validation via CSV upload.
- Built a React frontend with TanStack Query across 8 views — KPI cards, OS distribution, scan coverage, and provider comparison charts, real-time filtering, CSV export, and a staleness indicator — fully containerized with Docker Compose for both frontend and backend.

Projects

CyberWallah — Cybersecurity Education Platform

Ongoing

Tech Stack: React, TypeScript, Vite, Tailwind CSS, React Router, Vercel

- Building a cybersecurity education platform for Indian beginners with a Cyber Dictionary covering 39+ terms including India-specific threats (Digital Arrest, UPI Fraud, SIM Swap) and their defences.
- Architected a scalable frontend with modular routing and reusable components, deployed on Vercel with SPA routing configuration and strict Content Security Policy headers.

ArcanePass CLI: Stateless Password Manager 

Jan 2025

Tech Stack: Node.js, JavaScript, SHA-256 Cryptography

- Built a stateless CLI password generator using SHA-256 hashing to deterministically derive secure, reproducible passwords from a master key — no secrets stored anywhere.
- Implemented configurable password policies (length, character sets) with an interactive prompt-driven interface, prioritizing security-by-design over convenience.

Snip.ly — URL Shortener with Authentication 2024

Tech Stack: React, Node.js, Express.js, MongoDB, JWT

- Built a full-stack URL shortener with JWT authentication, bcrypt password hashing, and collision-resistant short IDs using nanoid.
- Designed REST APIs for URL management and click analytics with input validation and rate limiting for abuse prevention.

Certifications

Oracle Cloud Infrastructure 2025 Generative AI Professional — Oracle	Oct 2025
Oracle Cloud Infrastructure 2025 Certified Developer Professional — Oracle	Sep 2025
Claude 101 — Anthropic	Mar 2026

Education

Lovely Professional University, Phagwara, Punjab	Expected July 2026
Bachelor of Technology — Computer Science and Engineering <i>Minor: Cybersecurity</i>	
H.M. Education Centre, Hooghly, West Bengal	2022
Intermediate	
H.M. Education Centre, Hooghly, West Bengal	2020
Matriculation
